

# WAYS WE ARE HELPING SAVE THE PLANET

As a company, we want you to feel comfortable with your decision of choosing us to replace your windows and doors and knowing you're making a sustainable choice.

Together, we can help make a difference.

## WE RECYCLE ALL OLD UPVC WINDOW FRAMES

All old window frames that we remove, we recycle as standard. These get remade into new upvc windows. Upvc can be recycled up to ten times, creating a much greener planet.

## SOLAR PANELS IN FACTORIES

We use suppliers that have solar panels installed in their factory roofs to power their manufacturing process, using renewable energy.

## REDUCED DELIVERIES

We have made sure our suppliers deliver all of our items to us once a week creating a bigger delivery one day a week, reducing our carbon footprint.

## REPLANTING TREES

The virgin timber used in our composite doors comes from renewable, sustainably managed, and certified North European forests where four seedlings are planted for every tree harvested.

## THERMALLY EFFICIENT WINDOWS AND DOORS

Poorly insulated houses need to use more energy to retain a warm home. Residential properties account for 26% of greenhouse gas emissions due to the energy used to heat a home. Our windows have lower U values which means better insulation.

## WASTE LICENCE'S

All of our vans carry waste licences which are a legal document required by the Environment Agency, as an effort to reduce the environmental impact of waste, by ensuring as a business, we are authorised to transport and dispose of waste appropriately.
